

DR. WACK

Made in Germany

Product-Information

The Problem:

Because until a few years ago there were very few matt painted or foil-coated motorcycles, care products are not specifically tailored to the needs of matt surfaces. Using traditional care products can change the motorcycle's appearance and, in the worst case, make it shiny. Matt surfaces are therefore often exposed to outdoor conditions without protection. Dirt, sun exposure, rain etc. corrode the paint and over time it will be unsightly.

The Solution:

MATT-WAX SPRAY

Product Advantages:

Maintains original matt effect and protects for an extremely long time. For paint and foil coating!

- Protects from environmental influences such as rain and UV radiation for an extremely long time
- Water rolls off
- Has water, oil and dirt-repellent properties
- Easy to apply
- Can also be used on matt foils

Applications:

Matt surfaces such as paint, foil-coating and rubber coating, such as surfaces of motorcycle parts or helmets

- Do not use on shiny surfaces

How to apply:

Shake bottle before use. Spray product onto a soft, lint-free cloth (or directly onto the surface) and evenly distribute on the cleaned and dried surface. Leave to dry for a short while. Buff using a fresh, white and lint-free cloth. That's it!

Note: Do not use in direct sunlight or on hot surfaces. Store in a frost-protected place. Do not breathe spray!

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
